

ET6000 1pps output to ET6000 1pps output
PRS-10 1pps output to PRS-10 1pps output (GA7, PT8)

A large, continuous set of data (over 32000 samples) must be displayed as overlaid segments, as above, due to limitations of Excel.
For convenience, the overlay period used here is three days = 25920 samples.
Near the beginning of the graph, one of the PRS-10s shows evidence of being in seek mode.
Near the end of the third day, the changing of the PLL loop time constant (x4) caused both PRS-10s to reenter seek mode.
